ANALYTICAL REPORT

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp LeJeune, Jacksonville, NC

Sample(s): CLJ-DS-10, CLJ-DS-11 and CLJ-DS-11D

Sample Type(s): Solid

Analysis Performed: Conventionals, Organics and RCRA TCLP Leachate Parameters

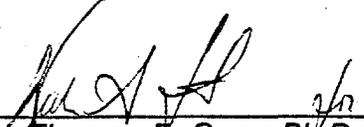

Date Sample Received: March 7, 1994

Date Order Received: March 7, 1994

Joblink(s): 615321

This report is "PROPRIETARY AND CONFIDENTIAL" and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

Reviewed and
Approved by:

Thomas E. Gran, Ph.D., Vice President

Date: 5/11/94

SUMMARY OF ANALYTICAL METHODOLOGY

Parameter	Reference	Method
Conventionals		
<u>RCRA Characteristics</u>		
pH, Electrode	SW-846	9045
Reactive Sulfide	SW-846	7.3.4.2
Flash Point, Seta Flash	SW-846	1020
Reactive Cyanide	SW-846	7.3.3.2
Organics		
Total Petroleum Hydrocarbons (TPHC) by GC		
Total Volatile Hydrocarbons (TVH) by GC	SW-846	8015
Total Extractable Hydrocarbons (TEH) by GC	SW-846	8100
RCRA TCLP		
Leachate Preparation	SW-846	1311
Herbicides by GC	SW-846	8150 (1)
Pesticides by GC	SW-846	8080
Metals (except mercury)	SW-846	6010
Mercury by Cold Vapor	SW-846	7470
Semi-volatile Compounds by GC/MS	SW-846	8270
Volatile Compounds by GC/MS	SW-846	8240

SDG NARRATIVE

Conventionals

The pH results are in standard units not mg/kg.

The method qualifier for pH (Electrode) is "pH", for Flashpoint it is "FP", for Reactive Cyanide it is "RC" and for Reactive Sulfide it is "RS". The CLP manual does not address these results or this method for reporting.

The Flashpoint results are in °C not mg/kg.

Total Petroleum Hydrocarbons by Gas Chromatography (TPH/GC)

Total Volatile Hydrocarbons

The holding time was exceeded for this analysis following CLP protocol of 10 days from sample receipt. Analysis was performed within holding time following SW-846 protocol of 14 days from sampling date. This analysis is not discussed or addressed in the CLP-SOW.

All matrix and method spikes were within acceptability limits.

The initial and continuing calibration criteria were met.

Total Extractable Hydrocarbons

Due to the high amount of analyte detected in the unspiked sample, matrix spike samples do not provide valid recovery data. Batch acceptance is based on method spike recoveries which were within acceptability limits.

Due to the nonhomogeneity of the sample CLJ-DS-11, a number of analyses did not duplicate within standard precision limits. Since CLJ-DS-11 and CLJ-DS-11D were field duplicates, further re-analysis was not conducted in the laboratory.

All initial and continuing calibration criteria were met.

TCLP Herbicides

All matrix and method spike recoveries were within acceptability limits.

The initial and continuing calibration criteria were met.

SDG NARRATIVE (continued)

TCLP Pesticides

Decachlorobiphenyl (DCB) was outside advisory limits in the confirmation analysis in samples CLJ-DS-11 and CLJ-DS-11D. Since no data was reported from the confirmation analysis and the samples involved are field duplicates with the same surrogate outside limits in the same direction, no further corrective action is required. The Toxaphene matrix and method spike recoveries were outside the established recovery criteria. The recoveries would lead to a high bias for any sample results reported.

Toxaphene was not detected in any of the samples associated with this sample batch, therefore, this anomaly does not impact the validity of the data as reported.

All initial and continuing calibration criteria were met.

TCLP Metals

Since the samples were analyzed for TCLP analytes the items listed (color before, artifacts, etc.) at the bottom of Form I-IN were not reported.

All of the Initial and Continuing Calibration verifications were inside the QC limits.

Due to the bottles used for the TCLP leachate preparation a small amount of Barium is present in the samples. The level is well below any level of concern for this project using this analysis. ASC believes that this will not affect the validity of data for this project.

The ICP Interference Check samples, the pre-digestion spike sample, and the duplicate sample analysis were within the required QC criteria.

The laboratory Control Sample exhibited good recoveries with a range between 92 to 105%.

Autosamplers were not utilized for the ICP analysis. The time sequence was kept manually and documented as close as possible to actual time. No problems were encountered.

Autosampler problems were encountered during the Arsenic LCS analysis. Some matrix interferences were noted for Arsenic and Selenium analyses. All Lead analyses required a 5x dilution due to severe matrix interferences.

TCLP Semi-volatile Organics

The Pentachlorophenol matrix and method spike recoveries were outside the established recovery criteria. The recoveries would lead to a high bias for any sample results reported. Pentachlorophenol was not detected in any of the samples associated with this sample batch, therefore, this anomaly does not impact the validity of the data as reported.

SDG NARRATIVE (continued)

Nitrobenzene-d5 was outside established recovery criteria for the method blank. The recovery would lead to a high bias for any results reported in that fraction. No results were reported for any of the samples in this analytical batch, therefore, this anomaly does not impact the validity of the data as reported.

All initial and continuing calibration criteria were met.

TCLP Volatile Organics

All matrix and method spikes were within acceptability limits.

The initial and continuing calibration criteria were met.

SDG NARRATIVE (continued)

TCLP Volatile Organics

All matrix and method spikes were within acceptability limits.

The initial and continuing calibration criteria were met.

by GC/MS

ANALYTICAL REPORT

REVISED 05/26/94

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp Lejeune, Jacksonville, NC

Sample Type(s): Drums

Analysis Performed: Compatibility Testing

Date Sample Received: February 25, 1994

Date Order Received: February 25, 1994

Joblink(s): 615277 and 615278

This report is "PROPRIETARY AND CONFIDENTIAL" and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

Reviewed and
Approved by:

Thomas E. Gran, Ph.D., Vice President

Date: 5/27/94

PROJECT NARRATIVE

The following items relate to the samples and analytical data contained in this report.

- o All sample results are reported on an as received "wet weight" basis.
- o Note any and all comments at the bottom of the tables in Appendix C.
- o **ASC** will retain samples for a maximum of thirty (30) days after completion of the analysis, samples will be held for a longer period of time, if appropriate arrangements are made in advance. A nominal disposal charge of \$5.00/sample will be imposed for unreturned samples.

Reason for Revision:

- o This report was revised to edit the PCB screen results. Elevated detection limits had been reported for some samples for the PCB's analysis due to matrix interferences on the GC.

PROJECT NARRATIVE

The following items relate to the samples and analytical data contained in this report.

- o All sample results are reported on an as received "wet weight" basis.
- o Note any and all comments at the bottom of the tables in Appendix C.
- o **ASC** will retain samples for a maximum of thirty (30) days after completion of the analysis, samples will be held for a longer period of time, if appropriate arrangements are made in advance. A nominal disposal charge of \$5.00/sample will be imposed for unreturned samples.

Analytical Services Corp.

ANALYTICAL REPORT

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp LeJuene, Jacksonville, NC

Sample(s): CLJ-DFE-01, CLJDS143.1, CLJ-DS-145 through CLJ-DS-147, CLJ-DS-149 and
CLJ-DS-150

Sample Type(s): Drum

Analysis Performed: Compatibility Testing

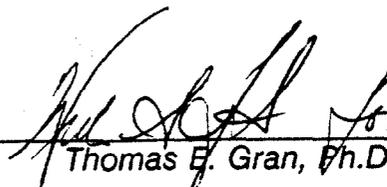

Date Sample Received: March 6, 1994

Date Order Received: March 7, 1994

Joblink(s): 615323

This report is 'PROPRIETARY AND CONFIDENTIAL' and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

Reviewed and
Approved by:

Thomas E. Gran, Ph.D., Vice President

Date: 3/31/94

PROJECT NARRATIVE

The following items relate to the samples and analytical data contained in this report.

- o All sample results are reported on an as received "wet weight" basis.
- o Note any and all comments at the bottom of the tables in Appendix C.
- o **ASC** will retain samples for a maximum of thirty (30) days after completion of the analysis, samples will be held for a longer period of time, if appropriate arrangements are made in advance. A nominal disposal charge of \$5.00/sample will be imposed for unreturned samples.

ANALYTICAL REPORT

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp LeJuene, Jacksonville, NC

Sample(s): CLJ-DWW-003

Sample Type(s): Liquid

Analysis Performed: Conventionals, Metals and Organics

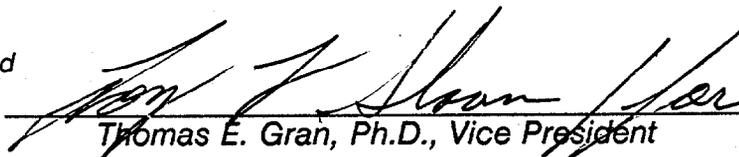

Date Sample Received: March 16, 1994

Date Order Received: March 16, 1994

Joblink(s): 615381

This report is "PROPRIETARY AND CONFIDENTIAL" and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

Reviewed and
Approved by:

Thomas E. Gran, Ph.D., Vice President

Date: 4/1/94

PROJECT NARRATIVE

The following items relate to the samples and analytical data contained in this report.

- o Note any and all comments at the bottom of the tables in Appendix C.
- o **ASC** will retain samples for a maximum of thirty (30) days after completion of the analysis, samples will be held for a longer period of time, if appropriate arrangements are made in advance. A nominal disposal charge of \$5.00/sample will be imposed for unreturned samples.

APPENDIX A
DATA SUMMARY REPORT

NOTE: The GC/MS screen data, if applicable, is included in Appendix B.

Analytical Services Corp.

ANALYTICAL REPORT

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp LeJuene, Jacksonville, NC

Sample(s): CLJ-DWW-003

Sample Type(s): Liquid

Analysis Performed: Conventionals, Metals and Organics

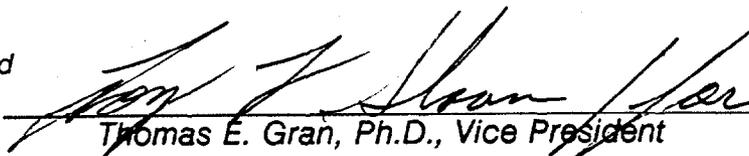

Date Sample Received: March 16, 1994

Date Order Received: March 16, 1994

Joblink(s): 615381

This report is "PROPRIETARY AND CONFIDENTIAL" and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

Reviewed and
Approved by:

Thomas E. Gran, Ph.D., Vice President

Date: 4/1/94

PROJECT NARRATIVE

The following items relate to the samples and analytical data contained in this report.

- o Note any and all comments at the bottom of the tables in Appendix C.
- o **ASC** will retain samples for a maximum of thirty (30) days after completion of the analysis, samples will be held for a longer period of time, if appropriate arrangements are made in advance. A nominal disposal charge of \$5.00/sample will be imposed for unreturned samples.

APPENDIX A
DATA SUMMARY REPORT

NOTE: The GC/MS screen data, if applicable, is included in Appendix B.

ANALYTICAL REPORT

Client: OHM Remediation Services Corporation
Southern Region (Morrisville, NC)

Attn: Kent Geis
Bill Perry

Project: 15226N - NEESA; Camp LeJeune, Jacksonville, NC

Sample(s): C6617 through C6622

Sample Type(s): Solid

Analysis Performed: Test Bulk, Conventionals, Metals and Organics

Date Sample Received: February 25 and March 6, 1994

Date Order Received: June 23, 1994

Joblink(s): 616083

This report is "PROPRIETARY AND CONFIDENTIAL" and delivered to, and intended for the exclusive use of the above named client only. Analytical Services Corporation assumes no responsibility or liability for the reliance hereon or use hereof by anyone other than the above named client.

SUMMARY OF ANALYTICAL METHODOLOGY

Parameter	Reference	Method
Conventionals		
Acids by IC (Cl, NO ₃ , PO ₄ and SO ₄)	CAWW	300.0
Test Bulking	ASTM	D5058
BTU/lb	ASTM	D240-76
Bulk Density	ASTM	D5057
Oxidizer	ASTM	D4981
<u>RCRA Characteristics</u>		
pH, Electrode	SW-846	9045
Reactive Sulfide	SW-846	7.3.4.2
Flash Point, Seta Flash	SW-846	1020
Reactive Cyanide	SW-846	7.3.3.2
Metals		
Total Metals	SW-846	6010
Mercury by Cold Vapor	SW-846	7471
Organics		
Volatile Compounds by GC/MS	SW-846	8240
Semi-volatile Compounds by GC/MS	SW-846	8270
Pesticides and PCBs by GC	SW-846	8080

Test Bulking Results

Facility: 15226N
Sample Identifier: C6617
ASC Sample Number: JM9434

Test Bulking Parameters	Result
Date of Test Bulk:	June 24, 1994
Samples Bulkied:	001, 002, 003, 004, 005, 006, 008, 009, 010, 011, 013, 014, 018, 019, 021, 022, 023, 024, 025, 026, 032, 043, 063, 072, 074, 076 077, 078, 079, 080 and 149
Temperature Rise:	< 2.0°C
Gas Evolved:	None observed
Precipitate:	None observed
Gelling or Solidification:	None observed

Test Bulking Results

Narrative for SDG # C6617**Metals**

All of the initial calibration criteria were within QC limits.

Sodium and Selenium did not pass all continuing calibration criteria but should not negatively impact the data validity.

The CRDL standard met all QC criteria.

Low levels of Calcium, Iron, Manganese and Zinc were detected in the Method Blank. All associated samples have been flagged with the appropriate qualifier. This anomaly should not impact the validity of the data generated.

Low spike recoveries were noted for Antimony, Arsenic, Cadmium, and Selenium. All Post Spike recoveries were within acceptable QC limits.

Aluminum, Copper, Iron and Manganese were outside QC limits due to the high levels of these elements present in the unspiked sample. Post spikes were not required.

Duplicate results were >10% for Antimony, Arsenic, Cadmium, Cobalt, Iron, Lead, Manganese, Mercury, Selenium and Silver. This will have minimal impact on the validity of the data submitted.

All Laboratory Control Samples (LCS) were within acceptable QC limits.

All holding times were met for this SDG.

No Quarterly Linearity Checks are available for this SDG.

Narrative for SDG # C6621**Metals**

All of the initial calibration criteria were within QC limits.

Copper, Sodium and Zinc did not pass all continuing calibration criteria but should not negatively impact the data validity.

Low levels of Calcium, Iron, Manganese and Zinc were detected in the Method Blank. All associated samples have been flagged with the appropriate qualifier. This anomaly should not impact the validity of the data generated.

Low spike recoveries were noted for Antimony, Manganese, Mercury, Silver and Thallium. Post Spike recoveries were within QC limits.

Duplicate results were >10% for Thallium. This will have minimal impact on the validity of the data submitted.

All Laboratory Control Samples (LCS) were within acceptable QC limits.

All holding times were met for this SDG.

No Quarterly Linearity Checks are available for this SDG.

Comments:

Narrative for SDG # C6622**Metals**

All of the initial calibration criteria were within QC limits.

Copper and Sodium did not pass all continuing calibration criteria but should not negatively impact the data validity.

The CRDL standard met all QC criteria.

Low levels of Barium were detected in the Method Blank. All associated samples have been flagged with the appropriate qualifier. This anomaly should not impact the validity of the data generated.

Low spike recoveries were noted for Aluminum and Calcium. All Post Spike recoveries were within acceptable QC limits.

Duplicate results were within QC limits.

All Laboratory Control Samples (LCS) were within acceptable QC limits.

All holding times were met for this SDG.

No Quarterly Linearity Checks are available for this SDG.

Narrative for SDG # C6617**Conventionals**

CLP Forms and/or analytical requirements do not apply to all Conventional Level C deliverable requirements. Every effort was made to conform to the CLP format and all applicable CLP/Level C forms have been included.

The pH results are reported in standard units and not mg/kg.

The Flashpoint results are reported in °C not mg/kg.

The BTU results are reported in BTU/lb. not mg/kg.

The Density results are reported in g/cc not mg/kg.

The method qualifier for pH (Electrode) is "PH", for Flashpoint it is "FP", for BTU it is "BT", for Density it is "D" and for the IC Acids it is "IC". The CLP manual does not address these results or this method for reporting.

The Test Bulk data is reported on ASC's standard Test Bulk Table and can be found prior to the Metals analytical data.

The Method Blank contained low levels of target constituents. All associated samples have been flagged with the appropriate qualifier. This anomaly should not affect the validity of the data as reported.

All matrix spike recoveries were within acceptable QC limits.

All duplicates were within acceptable QC limits.

All initial and continuing calibration criteria were met for this SDG.

The LCS was within acceptable QC limits.

Narrative for SDG # C6617

Laboratory: Analytical Services Corp.

Project #: OHM # 15226

Project Location: Camp Lejeune
Jacksonville, North Carolina

Samples in this Sample Delivery Group (SDG):

C6617	C6620
C6618	C6621
C6619	C6622

Volatiles by GC/MS

Elevated Practical Quantitation Limits (PQL) were reported due to high levels of target and/or nontarget compounds present in the samples.

Hexane appeared as an artifact that was known to be a laboratory contaminant. This compound elutes at approximately 8.8 minutes and was not included as part of the TIC screen data reported on Form I-VOA TIC.

ASC has increased the number of "target compounds" accurately quantitated to include additional compounds not on the CLP TCL compound list. These compounds would normally be reported as TIC data with an estimated quantitation. ASC has reported these constituents on the Form I-VOA TIC table with a quantitation value that was derived in the same fashion as the target compounds. This gives the data user a more accurate quantitation for these constituents. Data reported in this manner has been flagged with an "X" qualifier.

Volatile Organics by GC/MS (cont'd)

Zero of 66 surrogate recoveries were outside QC limits.

Two of 40 matrix spike recoveries and zero of 20 matrix RPD's were outside QC limits.

All internal standard area counts and retention times were within QC limits.

Initial calibration criteria were met.

Vinyl Chloride was outside calibration Check criteria on 6/27/94. This compound was not detected in any samples analyzed against this standard but would have been detected if present in any of the samples. All other compounds were within calibration check criteria, therefore, the calibration standard was accepted. All other calibration check standards were within acceptance criteria.

All internal standard criteria were met for this SDG.

All holding times were met for this SDG.

Semivolatile Organics by GC/MS

Elevated Practical Quantitation Limits (PQL) were reported due to high levels of target and/or nontarget compounds present in the samples.

ASC has increased the number of "target compounds" accurately quantitated to include additional compounds not on the CLP TCL compound list. These compounds would normally be reported as TIC data with an estimated quantitation. ASC has reported these constituents on the Form I-SVA TIC table with a quantitation value that was derived in the same fashion as the target compounds. This gives the data user a more accurate quantitation for these constituents. Data reported in this manner has been flagged with an "X" qualifier.

One of 84 surrogates were outside QC limits, 18 surrogates were diluted below detectable levels.

Zero of 22 matrix spike recoveries and zero of 11 matrix RPD's were outside QC limits. Other matrix spike/matrix spike duplicates were diluted below detectable levels. The samples associated with these are C6617 through C6621.

All method blanks were within QC criteria.

One internal standard area count was outside QC limits for samples C6619 and C6620 due to matrix interferences. All retention times were within QC limits.

All compounds met initial calibration criteria.

One compound was outside continuing calibration criteria on 6/30/94. All other constituents were within criteria and the one compound was not detected in any samples associated with the standard in question. The compound would have been detected in the samples, if present. Therefore, the calibration check standard was accepted. All other calibration check standards were within acceptance criteria.

No GPC cleanup was performed on the solid samples submitted in this SDG.

All holding times were met for this SDG.

Pesticides/PCB's by GC

Elevated Practical Quantitation Limits (PQL) were reported due to high levels of target and/or nontarget compounds present in the samples.

Seven of 60 surrogates were outside advisory QC limits, 20 surrogates were diluted below detectable levels.

Zero of 12 matrix spike recoveries and one of 6 matrix RPD's were outside QC limits. Other matrix spike/matrix spike duplicates were diluted below detectable levels. The samples associated with these are C6617 through C6621.

Low levels of 4,4'-DDT were detected in the Method Blanks and should therefore, be taken into consideration when assessing the data. All DDT data has been flagged with the appropriate qualifier.

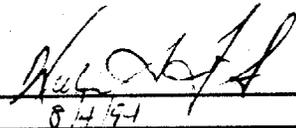

Problems were encountered with the initial calibration for the Pesticide analysis. The initial calibration for the primary analysis had five constituents greater than the 20% RSD requirement. The confirmation had five constituents greater than the 20% RSD requirement. The primary continuing calibration criteria was not met for five constituents. The confirmation continuing calibration criteria was not met for five constituents.

The %RPD criteria were not met for any PEM standards analyzed in this SDG.

No GPC cleanup was performed on solid samples submitted in this SDG.

All holding times were met for this SDG.

Quant Output File: ^C8153::QT

Name: 15226N 06618

Misc: JM9435U,N213670,S:M2,5.30,5:1,

Quant Time: 940627 18:46

Quant ID File: IC627A::D4

Injected at: 940627 18:10

Last Calibration: 940627 11:14

Compound No: 72

Compound Name: 4-Isopropyltoluene

Scan Number: 1193

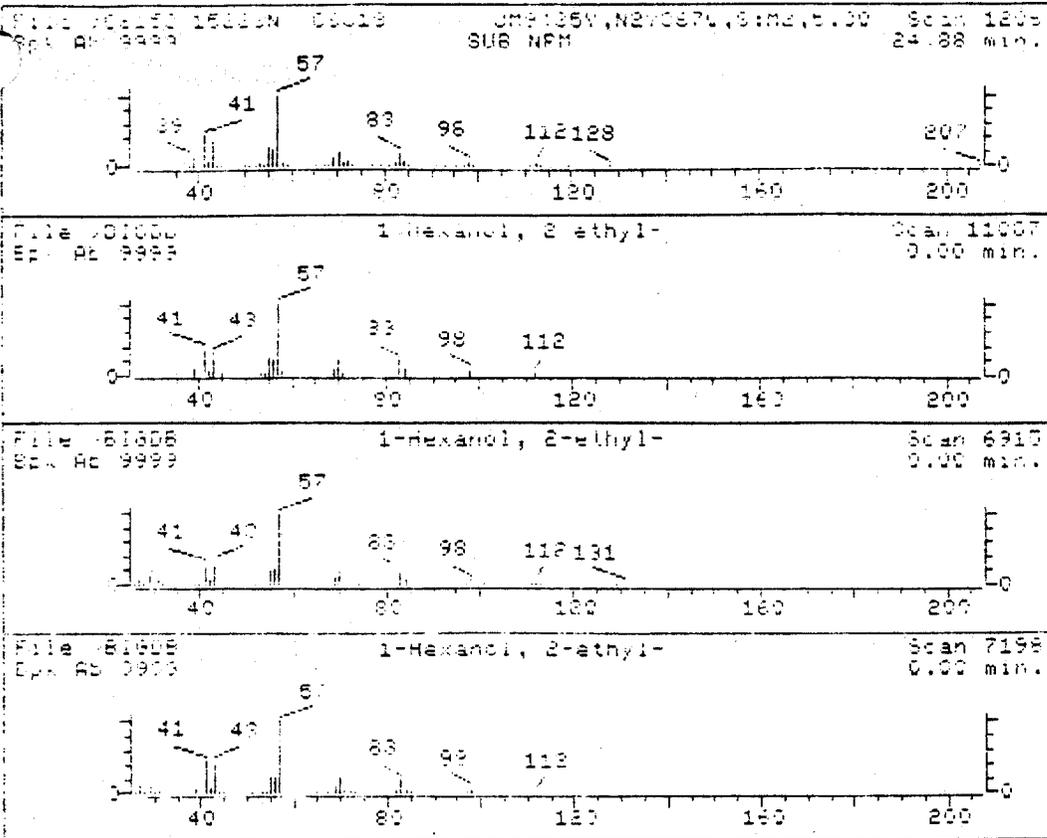

Retention Time: 24.43 min.

Quant Ion: 119.0

Area: 7532

Concentration: 2.04 ug/l

q-value: 89

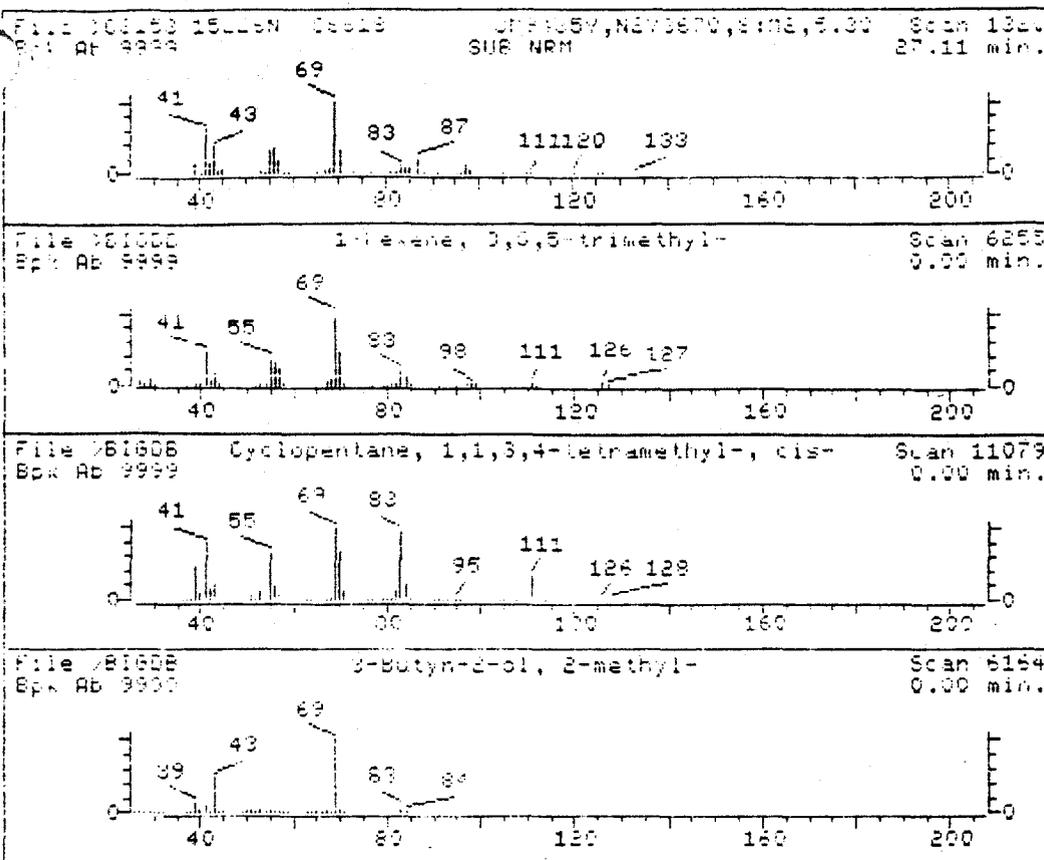

Data File: >08153::08
Name: 15226N D7618
Misc Data: JMF135V,N2U3670,S:M2,5.30,F:1,
RT (min): 24.88
Scan: 1206
Area: 502517 Rank: 2
Semi-quantitative Conc (uncorrected): 74.37 ug/l
Semi-quantitative Conc (corrected): 14.03 ug/kg
Calculated using Istd: CHLOROBENZENE-45 (ISTD) @ 19.59 minutes

~~0.005~~ * 42670 = 0.030
